Section 5. Terms of Reference

Background and Objective

Climate change's accelerating adverse impacts on economies and societies across the world are exacerbating. As highlighted by IPCC's AR6 report, the world is not on track to keeping within reach the 1.5°C limit agreed in Paris at COP21, and the impact of missing this target is far worse than earlier projections. To keep the goal alive, and ensure a livable world for future generations, an estimated 43% of global emissions must be cut by 2030. The global south, comprising of emerging and developing countries, is facing majority of the brunt of the adverse climate impacts, in the continued absence of adequate support from developed economies, as committed. These countries are left to grapple on their own with the trilemma of developing their economies, achieving clean energy transitions, and addressing climate change impacts.

In this context, ISA released a report at COP 28 titled "*Unleashing the Role of Solar in advancing economic, social and environmental equity*". This report outlined the challenges and opportunities of different regions in achieving a clean energy transition. At the same time, keeping in view the challenges around access to energy, affordability, and access to technology, and means of increasing finance in some of the most vulnerable countries.

In taking this forward, ISA is looking to hire to conduct the next edition of this report. This edition of the report, the attempt is to delve deeper into indicators that can best capture the developmental challenges that come with energy transitions, while also assessing how solar and RE driven energy transitions can help improve socio-economic wellbeing in addition to climate and environmental benefits. This edition of the report will also assess case studies of countries that have succeeded in decarbonizing the energy systems and have had demonstrable cross-sectoral co-benefits.

Scope of Work and Deliverables

Activity 1: Identification of Indicators: Using a data-driven approach to identify country-level indicators which can effectively capture the trilemma of an energy transition amid socio-economic and developmental challenges. These could include, for example, indicators on energy access & intensity, solar deployment, and investment, employment generated and other such strategically relevant points. These indicators should be informed by both, historical data for key developmental trends, and stakeholder informed interpretation of underlying policies. This activity will in turn require the consultant to develop a set of indicators basis which countries can be classified for further assessment, as covered in activities 2 and 3.

- **Output 1:** Development of 8-10 indicators representative of economic growth, energy consumption patterns, and socio-economic wellbeing.
- **Deliverable 1:**
 - 1.1. Creation of an advisory group comprising sectoral experts on sustainable and equitable energy transitions. Consultant to form this group with cross-country representation from governments, industry, academia, finance, private sector, and civil society.
 - 1.2. Interim report identifying indicators, rationale for selection and narrative on how they capture the energy transition trilemma of meeting rising energy demands amid socio-economic and developmental challenges.
 - 1.3. These should be developed with informed stakeholder consultations and under the guidance of an advisory group. The consultant should bring together stakeholders from diverse backgrounds

(academia, industry, civil society) across sectors and regions. These consultations should be conducted within the chosen country/ group of countries.

1.4. Classification of countries based on indicator-informed criteria.

Activity 2: Scenario Development. Consultant will work towards developing scenarios for assessment for select indicators (identified in Activity 1) which will be representative of socio-economic and developmental gains from solar-powered energy transitions. These scenarios should be developed under the supervision of key consultation and advisory group which will oversee the scenario assessment activity.

Output 2: Development of scenarios basis the indicators representative of economic growth, energy consumption patterns, and socio-economic wellbeing.

- **Deliverable 2:**

- 2.1. Consultation with Advisory Group which will guide the development and design of scenarios.
- 2.2. Stakeholder consultations to ensure robustness of data, assumptions and scenario design. The consultant should bring together stakeholders from diverse backgrounds (academia, industry, civil society) across sectors and regions. Consultant will be responsible for all logistical arrangement of such consultation.
- 2.3. Interim report on data used and sources, underlying assumptions and scenario options capturing developmental benefits on select indicators as a result of solar driven transitions. The consultant will be required to prepare stakeholder-informed scenarios, to assess the impact of deploying solar and other RE, on overall wellbeing including, for example, on access, improved human development indices, economic opportunities, reduced emissions etc.

Activity 3: Scenario Analysis for at least 2 and no more than 4 scenarios developed from activity 2, which best capture the developmental benefits for selected countries, when a solar-driven energy transition takes place. The consultant will develop key messages and inferences-based modelling outcomes with existing policy discourse/framework. These should be informed by periodic consultations with advisory group and at least 2 stakeholder consultations with diverse experts across chosen countries, in different sectors.

The consultant will also report and document the outcomes as visually engaging presentations and reports, entailing key policy messages and detailed inferences for countries. The report thus developed will assess the findings of the scenario considering the current policy landscape, developmental prerogatives, international developments, and impact on the socio-economic wellbeing of the population.

Output 3: Scenario analysis for selected countries, capturing the developmental/ socio-economic benefits through an energy transition enabled by solar. Building a narrative basis the outcomes of the scenario analyses on the indicators; development of final report and key messages.

- **Deliverable 3:**

- 3.1. Final report with scenario analysis, building the narrative, inferences of outcomes, key message, and way forward.
- 3.2. Visually engaging presentations summarising reports, including key messages and inferences for policymakers.
- 3.3. Outreach and dissemination of the same among relevant and high-level stakeholders. On-ground support for high level events planned such as at COP29 and other ISA events where this report will be presented.

Activity 4: Outreach and dissemination. Considering this study will look at diverse countries, consultations with stakeholders across regions and sectors, comprising industry experts, academicians, private sectors, government representatives and civil society, the consultant should have necessary networks to facilitate such stakeholder consultations across regions.

The consultant will be required to organise in-person stakeholder consultations across geographies/ selected countries. Logistics will be handled by ISA however the consultant will provide all knowledge support and in-person support for consultations, dissemination, and other events.

Dissemination of results should entail dissemination workshops, launch events. Support with communication materials to support the reports, in the form of event brochures, agendas, presentations, talking points, minutes for all dissemination events.

On-ground support for high level events planned such as at COP29 and other ISA events where this report will be presented.

- **Output 4:** Overall communication, outreach, and dissemination support for 4 consultations with diverse stakeholders as required in Activities 1 and 2.
- **Deliverable 4:**
 - 4.1. Final report as an interactive digital report, designed as a webpage, conveying key messages through interactive infographics, and inferences for policy makers.
 - 4.2. 50 printed copies of the final report.
 - 4.3. Outreach support for stakeholder consultations, capturing minutes of the meeting, and preparing summary documents of each.
